

Connect VPN

In order to connect to our network and access internal company resources we are using a VPN

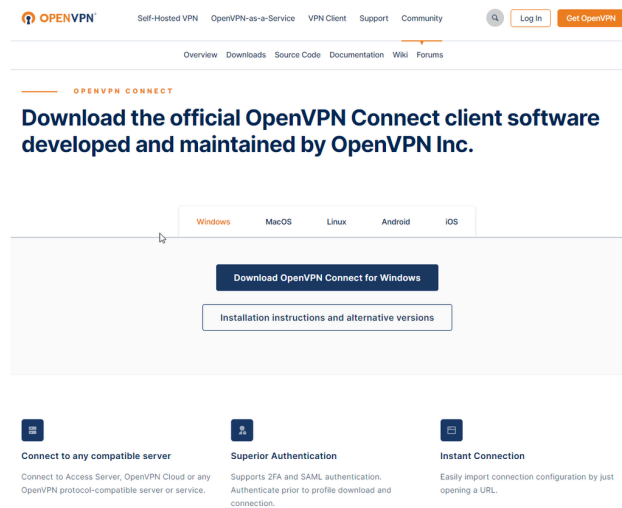

You will require the following

1. Installing a VPN Client
2. And VPN Profile File

How to:

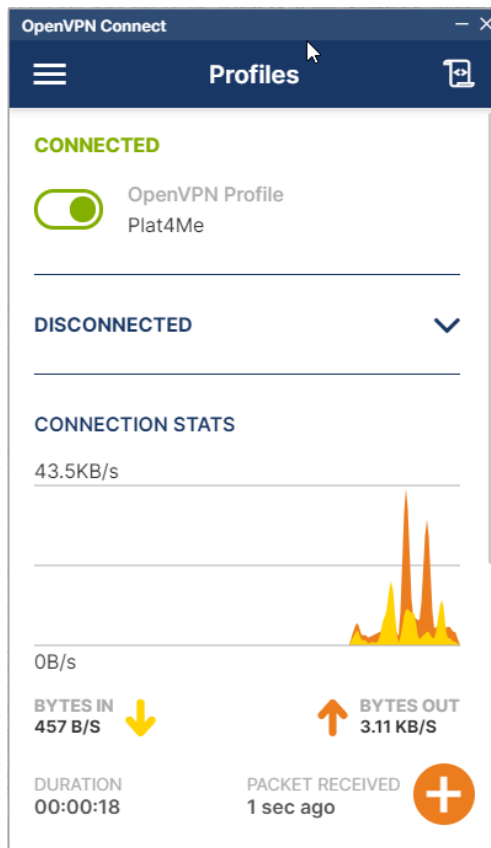

1. Installing a VPN Client

You can install an [OpenVPN Connect](#) or an open vpn client of your choosing

Downloading

After installing it you should open it and load the profile file received from IT and and just connet it will look like this

this means all good and you are connected.

1. VPN Profile file should be request from direct manager.
